Abstract of corresponding document: **DE4404990**

A process for producing a sterile prednisolone gel is characterised in that a sterile polyacrylate gel is produced in a manner known per se, prednisolone or its pharmaceutically acceptable esters are sterilised and incorporated in appropriate amounts in aseptic conditions into the polyacrylate gel, or the sterile prednisolone or its esters are suspended in part of the water amount required for producing the polyacrylate suspension and are homogeneously incorporated into the polyacrylate, which is then transformed into a gel.
